Computerised Solutions for the  
Road Haulage and Logistics Industries

Traffic Desk

**stirlingsolutions**  
SOFTWARE FOR THE LOGISTICS INDUSTRY

## Stirling Solutions Traffic Desk Module

Stirling Solutions Traffic Desk Module can be utilised on either a stand-alone basis or integrated solution to suit your requirements. It enables the user to dynamically manage and optimise the delivery of goods, services and information. Facilitating greater and immediate control for users and management, assisting your company to maximise its resources. Whilst extremely powerful, Stirling Solutions have managed to maintain a high degree of flexibility through data entry, making Traffic Desk easy to implement and able to fit in with the way you choose to work.

### Stirling Solutions Traffic Desk Module offers you the benefits of:

- A user configurable Traffic Desk diary screen with powerful search and filtering facilities.
- Comprehensive integration with Stirling Solutions Warehouse, Garage Workshop, Accounts, Depot Scanning, Document Scanning, eTransport, eDriver and eSubcontractor Modules.
- Invoicing facility, with an option to email invoices en-masse.
- Links to various Pallet Network's Hub systems.
- Configurable job import facility enabling third party integration.
- Integrated links to third party mapping software.
- Comprehensive transport reporting offering both standard and bespoke tailored reporting. Incorporating all aspects of transport documentation, operational and management reporting, through to KPI reporting.
- Quick job entry screen, facilitated by our TransportLite Application.
- Automatic job rating and job costing facility.
- Load build and on screen planning functionality, supplemented by Traffic Desk's Planning Application, offering the user a drag and drop option in the allocation of driver, vehicle, trailer and subcontractor resources.
- Integrated Product Facility for companies who not only provide a haulage and distribution service but also offer either their own or third party products.
- Option to record hazardous product details.
- Driver debrief / job discrepancy recording and reporting.
- Option to view both scanned pods and digital signature capture information directly from the respective Traffic Desk job.
- Configurable bespoke information capture through utilisation of user definable fields and analysis codes, supplemented by reporting.
- Comprehensive Driver, Vehicle, Trailer and Subcontractor maintenance files.
- Option to create either email or text message alerts.
- Links to third party accounts packages.
