Accounts Module

Companies choose Stirling Solutions Accounts module as it offers comprehensive integration to our other software modules, subsequently assisting in streamlining essential business processes.

Stirling Solutions Windows based Accounts module is designed to simplify otherwise complex accounting procedures, enabling you the confidence to produce financial information at the touch of a button.

All the functionality you would expect from a comprehensive accounts package come as standard. The true benefits of an integrated system is that data entry duplication is avoided as original source data is required to be input only once, seamlessly updating other modules of our software.

Stirling Solutions Accounts Module offers you the benefits of:

- Producing a Comprehensive set of Financial Accounts.
- Separate Sales, Purchase and Nominal Ledgers.
- Complete Bank Reconciliation facility.
- VAT return collation with reconciliation reports.
- Integrated Asset Register.
- Comprehensive Budget input and monitoring facility.
- Complete system interrogation, enabling comprehensive visibility of all accounting records / transactions.
- Comprehensive reporting function through Crystal Reports.
- Multi Currency facility.
- Creation, copy and reversal of journals with both browse and query facility.
- Disputed invoices and credit limit control flexibility.
- System generated remittances, customer statements, cheque printing and BAC's report production, which could subsequently be exported to your third party banking software.
- Integrated link with our Payroll module, enabling transfer of accounting entries from our Payroll software on completion of running your periodic payrolls.
